**NEW JVC HOME THEATER SYSTEM CAN BE WALL-MOUNTED
NX-T10**

Sleek new 2.1-channel system can be set up horizontally, vertically or wall-hung.

Lay it down, stand it up or hang it on a wall – a stylish new JVC Living Entertainment system offers the kind of placement flexibility that makes it easy to suit virtually any situation or personal preference.

The new JVC NX-T10 is a 2.1-channel Living Entertainment system comprised of a low-profile main unit, two compact omni-directional main speakers and a powered subwoofer. The sleek, wedge-shaped main unit can be placed flat or stood vertically on a tabletop, or hung on a wall, making it an ideal design complement to a wall-mounted flat panel television.

The main unit is a DVD receiver with a pair of repeater HDMI inputs and an HDMI output with 1080p upconversion. In addition, it is HDMI CEC compatible. Other features include Dolby Digital and DTS decoding, and DivX playback for enjoying video downloaded from the internet. It includes USB Host for playback of music files stored on, or recording CDs directly to a USB mass storage device.

The system's two compact main speakers, which can be wall-hung, feature an omni-directional design, each containing one forward-firing driver and a second upward-firing driver with a diffuser. This upward-firing driver creates a realistic surround sound effect without the need for a separate pair of rear speakers and the placement and wiring challenges they create. Five separate amplifiers are housed in the subwoofer cabinet – main left, main right, surround left, surround right, and subwoofer.
