**JVC DEBUTS NEW 5.1 CHANNEL HOME ENTERTAINMENT SYSTEMS  
TH-G31 and TH-G61**

*High-Power New line with HDMI output and USB Host*

New JVC home theatre systems unveiled today are designed to complement today's high definition displays and handle the various range of digital sources now available.

The two systems, the TH-G31 and TH-G61 are 1000-watt, 5.1-channel systems comprised of a progressive scan DVD receiver, five speakers and a subwoofer. Each system includes an HDMI output with 1080p up-conversion. A front auxiliary input on each system makes connecting additional sources quick and simple. Both systems offer Dolby Digital and DTS decoding.

The systems are designed to complement the latest generation of sleekly styled flat panel TVs, with a glossy black low-profile receiver that features illuminated function keys. The centre channel speaker is a crisply-styled horizontal unit that will look smart either above or below the TV. As for playback options, JVC's home entertainment systems easily accommodate both the old and the new, combining DVD/CD playback and FM tuner including Radio Data System and the ability to handle digital audio and video files from a wide variety of sources.

The TH-G61 also features floor standing front speakers.
